

VISTA

Your answer to a complete
site assessment solution

Had enough of inefficient manual processes that slow down your clinical studies significantly?

During the clinical study start-up phase, site assessments are conducted to determine the suitability of potential sites. This involves a great deal of back and forth communications between the study team and the site through multiple paper questionnaires, phone calls, faxes and emails. The process is tedious and time-consuming, often resulting in costly and frustrating delays of 1 to 4 weeks.

VISTA automates this communication process, thus allowing you to gather fast and accurate site information for the effortless assessment and qualification of investigative sites before each study.

Harness sophisticated technology

- > Fully customizable online site feasibility and qualification questionnaires
- > Automatic prompts ensures that important questionnaire fields are not left blank
- > Fast and accurate assessment of sites' computer infrastructure for EDC studies
- > Data is captured and stored in a central database upon submission
- > Protection of data through secure transmission via a SSL link
- > Automated email/fax reminder system improves investigators' response rates
- > XML format allows for easy integration with other clinical trial systems

Relieve the burdens of investigators and clinical staff

- > Improves speed and ease of collecting site information for clinical staff
- > Eliminates need for manual double data entry
- > Centralized avenue for investigators to provide site information
- > Web-based format increases convenience in submitting and collecting data

Achieve faster and better site selection decisions

- > Clinical staff obtains information from sites in a much shorter time
- > Study start-up process is streamlined as sites are selected and initiated faster
